WhatsApp Chatbot For Business: A WhatsApp Chatbot for Business is an automated messaging assistant that helps companies connect with customers directly on WhatsApp. It can instantly reply to common questions, confirm bookings, send order updates, share product details, and even provide 24/7 support all without needing constant human effort.

For businesses, it's like having a smart digital team member available round the clock. The chatbot not only saves time and reduces workload but also improves customer satisfaction by giving quick and accurate responses. Since customers already use WhatsApp daily, meeting them there with a chatbot makes communication faster, easier, and more personal.
